MODEL

KD-A11 A/B/C/E/J/U

STEREO CASSETTE DECK

No. 4192
June 1980

Contents

Specifications

Type : Stereo cassette deck
Track system : 4-track, 2-channel
Tape speed : 1-7/8 inch/sec (4.8 cm/sec)
Frequency response:
(0 VU recording)
Metal tape *1 ; 40–11,000 Hz (± 3 dB)
SA/Chrome tape *2 ; 40–8,000 Hz (± 3 dB)
SF/Normal tape *3 ; 40–8,000 Hz (± 3 dB)
(-20 VU recording)
Metal tape *1 ; 30–16,000 Hz
40–15,000 Hz (± 3 dB)
SA/Chrome tape *2 ; 30–16,000 Hz
40–15,000 Hz (± 3 dB)
SF/Normal tape *3 ; 30–15,000 Hz
40–14,000 Hz (± 3 dB)
Surpasses DIN 45 500
Note: *1 ... SCOTCH METAFINE or Equivalent
*2 ... TDK SA or Equivalent
*3 ... MAXELL UD or Equivalent
S/N ratio : 60 dB (from peak level, weighted, Metal tape)
The S/N is improved by 5 dB at 1 kHz and by 10 dB above 5 kHz with DOLBY N.R. on
(DIN 45 500 weighted)
Wow and flutter : 0.05% (WRMS), 0.15% (DIN 45 500)
Crosstalk : 65 dB (1 kHz)
Harmonic distortion : K3; 0.5%, THD; 1.0% (metal tape, 1 kHz 0 VU)
Bias : AC bias
Erasure : AC erasure
Heads : 2 heads
METAPERM head for recording/playback and 2-gap ferrite head for erasure

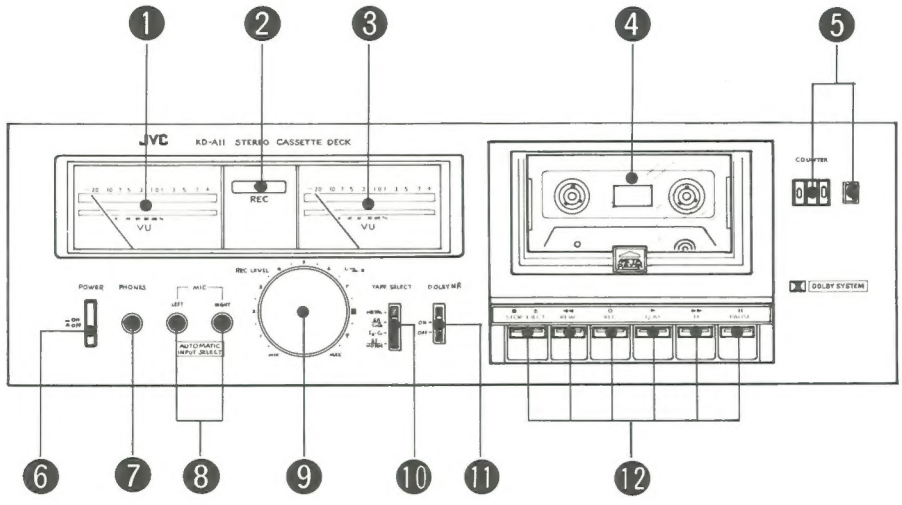
Motor : Electronic governed DC motor
Fast forward time : 95 sec. with C-60 cassette
Rewind time : 95 sec. with C-60 cassette
Semiconductors : 3 ICs, 21 transistors, 17 diodes 1 LED
Input terminals :
Mic jack x 2 ; Max. sensitivity; 0.2mV (-72 dBs)
Matching impednace; 600Ω – 10kΩ
Input jack x 2 ; Min. input level; 80mV (-20 dBs)
Input impedance; 100kΩ
Output terminals :
Output jack x 2 ; Output level; 300mV
Output impedance; 5kΩ
Phones jack x 1 ; Output level; 0.3mW (8Ω)
Matching impedance; 8Ω – 1kΩ
DIN socket : Min. input level; 0.1mV/kΩ
Input impedance; 10kΩ
Output level; 380mV
Output impedance; 5kΩ
Power requirement : AC 240V, 50Hz (KD-A11A)
AC 240/220/120V, 50/60Hz (KD-A11B/C/E/J)
AC 240/220/120/100V, 50/60 Hz (KD-A11U)
Power consumption: 10W
Dimensions : 16-1/2"(420 mm)W
5-1/4" (134 mm)H
10-3/8"(264mm)D
Weight : 9.9 lbs (4.5 kg)

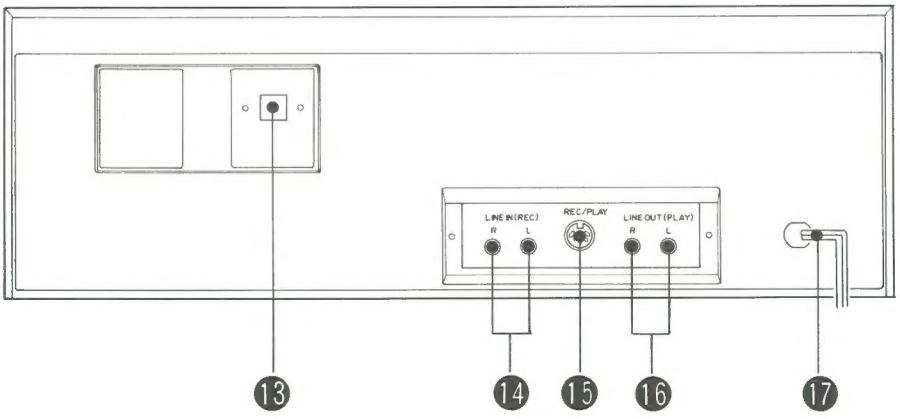
Design and specifications are subject to change without notice.

Features

- Single lever 4-stage tape select switch makes the KD-A11 compatible with all types of tape including the new metal Tape format.
- **IC-built Dolby*Noise Reduction System**
  Dolby System greatly improves performance by cutting out tape hiss, without changing the original music, thus making it every bit as good as professional standard type open reel tapes. High reliability and optimum quality are assured through employment of IC-built circuitry. (Dolby* is trademark of Dolby Laboratories Inc.)
  (Noise Reduction System manufactured under license from Dolby Laboratories Inc.)
- METAPERM head for recording/playback
  2 Gap ferrite head for erasure
- Automatic input select

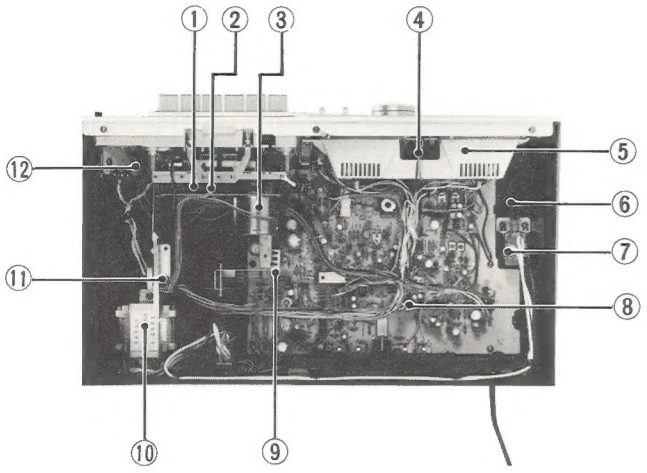
Controls and Connections



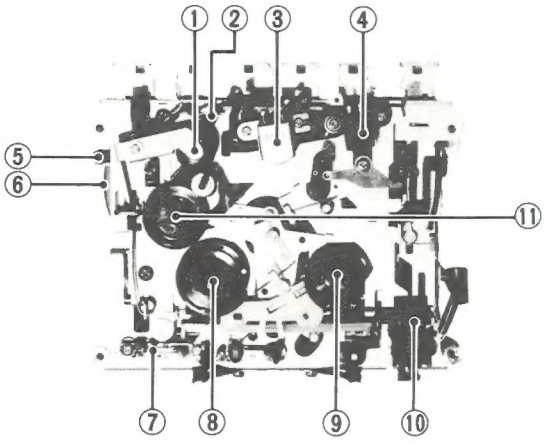


❶❸ VU meters
❷ Recording indicator (REC)
❹ Cassette holder
❺ Tape COUNTER/counter reset button
❻ POWER switch
❼ PHONES jack
❽ MIC jacks
❾ REC LEVEL controls
❿ TAPE SELECT switch
⓫ Dolby noise reduction switch (DOLBY NR)
⓬ Cassette operation buttons.
■▲ STOP/EJECT button
◀◀ REWIND button
○ Record button (REC)
▶ PLAY button
▶▶ FF button
❚❚ PAUSE button
⓭ Voltage select switch (KD-A11 B/C/E/J/U)
⓮ LINE IN (REC) terminals
⓯ DIN (REC/PLAY) socket
⓰ LINE OUT (PLAY) terminals
⓱ Power cord

Main Parts Location

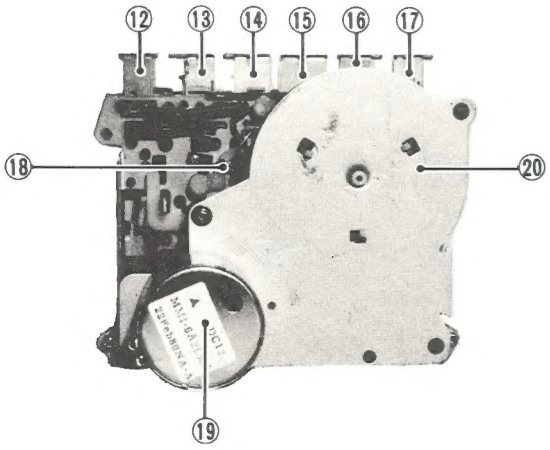


1. Flywheel/capstan belt
2. Auto stop solenoid
3. Motor
4. Recording indicator P.W.B.
5. Meter cover
6. Remote bar
7. Power switch P.W.B.
8. Main Amp P.W.B.
9. Recording spring
10. Power Transformer
11. Oiled-gear damper assembly
12. Reed switch P.W.B.



(Mechanical parts)

1. Pinch roller arm assembly
2. Pinch roller spring
3. REC/PB Head
4. Erase Head
5. Pause switch
6. Flywheel
7. Motor switch
8. Take up reel disc ass'y
9. Supply reel disc ass'y
10. Recording safety lever
11. Take up idler assembly
12. Stop/eject bar assembly
13. Rewind bar assembly
14. Recording bar assembly
15. Play bar assembly
16. Fast forward bar assembly
17. Pause bar assembly
18. Motor
19. Flywheel/Motor bracket



Maintenance

To get long, trouble-free service, maintenance is important. Do not forget cleaning and demagnetizing.

Cleaning

After long use, the heads and tape part – capstan, pinch roller, etc. – will become dirty with dust or magnetic particles. Dirty heads cause imperfect erasing or high frequency drop-off. A dirty capstan and pinch roller will cause unstable tape speed, leading to increased wow and flutter. Always keep them clean by following the procedure below.

1. Heads

1) Push Eject button to open the cassette holder.
2) Use the head cleaning stick provided to wipe the surface where the tape comes into contact with the head.
(It is effective to moisten the cotton with alcohol.)

2. Pinch rollar and capstan

Do the same method as heads.

3. Cabinet

When the cabinet becomes dirty, wipe it with a soft cloth soaked with a neutral cleaning solution of a polishing cloth.

* Do not use thinner or benzine.

Demagnetizing

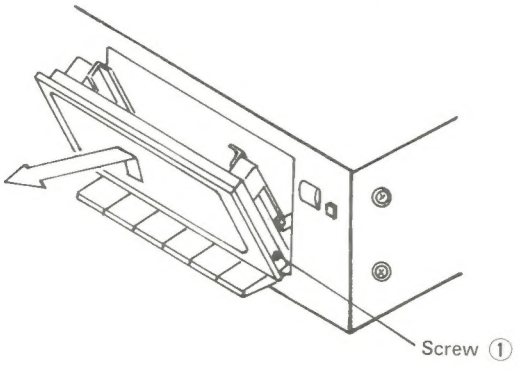
The heads are made from a material resistant to magnetization, but after long use they become magnetized.
A magnet brought into their vicinity can magnetize the heads, causing excess noise. If noise seems to have increased, demagnetize the heads with a head demagnetizer through the following procedure.

1. Turn the POWER switch OFF.
2. Wrap the tip of the demagnetizer with vinyl tape or soft cloth so as not to damage the head surface. Switch on the demagnetizer and bring it close to the head.
3. Move the tip of the demagnetizer slowly first to the left and right, then up and down in front of the head.
Gradually move it away from the head and switch it off at a distance of more than 30 cm. (12")
4. The erase head need not be demagnetized. The capstan shaft and tape guide should be demagnetized in the same way as the record/playback head.

* Do not bring a magnetized metallic object (a screwdriver, for example) near the head as this will increase noise.

Removal of the Main Parts

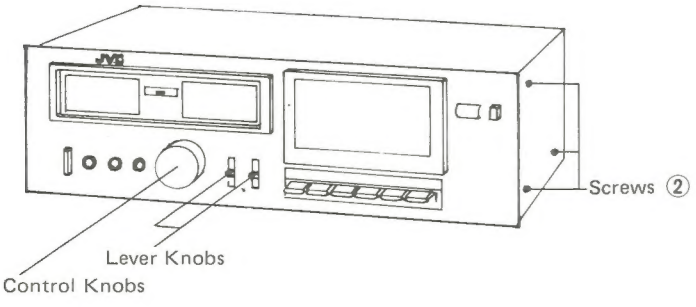
Observe care in handing the parts since the parts are small in size and the distance between them are short due to a deck design aimed mainly at compactness and high performance.



ENCLOSURE ASSEMBLY PARTS

Cassette lid .....

1) To open the cassette lid, push on the eject lever.
Remove a screw ① fastening the cassette lid. (its right low side)
Be careful of holding a nut.
2) Pull off the cassette lid to upper side.



Top cover .....

Remove 6 screws (left and right ..... 3 screws ② on each)

Control knobs (REC LEVEL) .....

Pull off them to forward.

Lever knobs (TAPE SELECT, DOLBY NR) .....

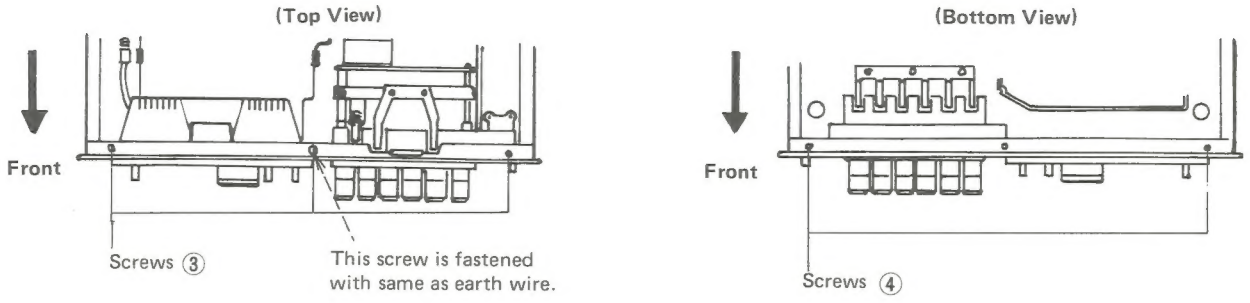
Pull off them to forward.

Bottom cover .....

Remove 3 screws fastening the bottom cover. (center screw is long size.)
Remove the bottom cover from 3 pawls of mold chassis.

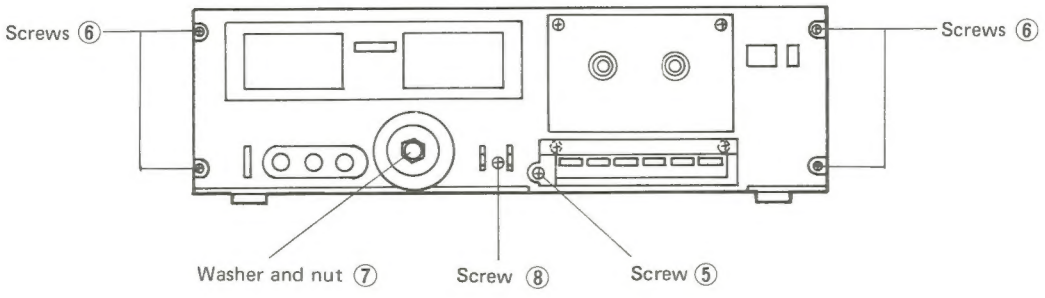
Front plate assembly .....

Remove 5 screws (3 screws ③ on upper side and 2 screws ④ on bottom side.) fastening the front plate assembly.



Front panel assembly

1. Remove a screw ⑤ fastening the button escutcheon ass'y (left side)
2. Open the cassette holder, and remove a screw fastening the arm ass'y for oiled-gear damper.
3. Remove 4 screws ⑥ fastening the front panel. (left and right ..... 2 screws on each)
4. Remove a washer and a nut ⑦ fastening the REC LEVEL control VR shaft.
5. Remove a screw ⑧ fastening the lever switch on main amp P.W. Board ass'y.
   (Mechanical assembly is removed with the same as front panel.)

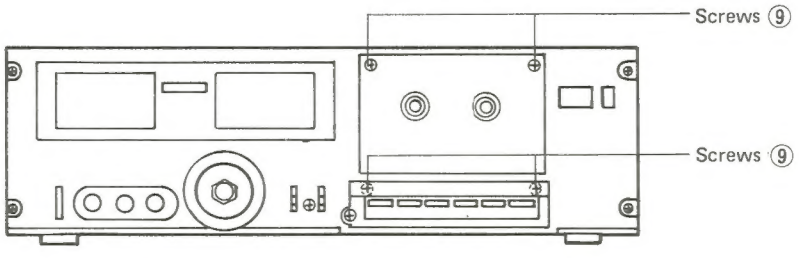


MECHANICAL ASSEMBLY

1. Remove the counter belt from counter.
2. Remove 4 screws ⑨ fastening the front panel.

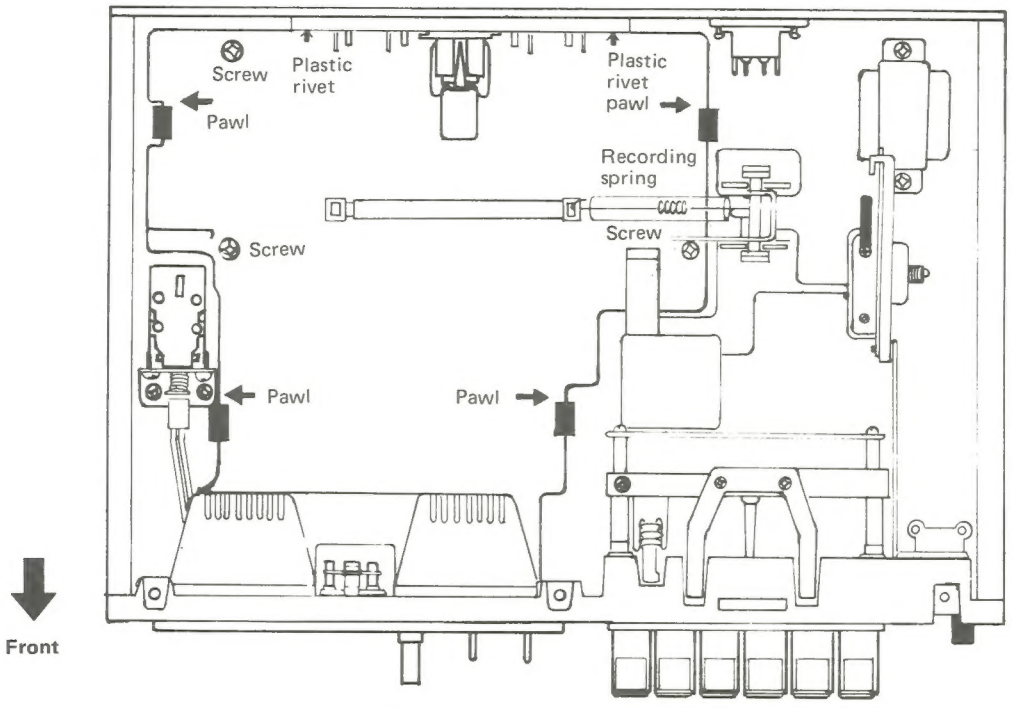
If you remove the mechanical assembly with not removed the front panel, do the following method.

1) Remove the mecha control plate.
2) Remove 4 screws ⑨ fastening the front plate.
   (When assembling the mechanical control plate, it need a new parts = the mechanical control plate cannot use again.)

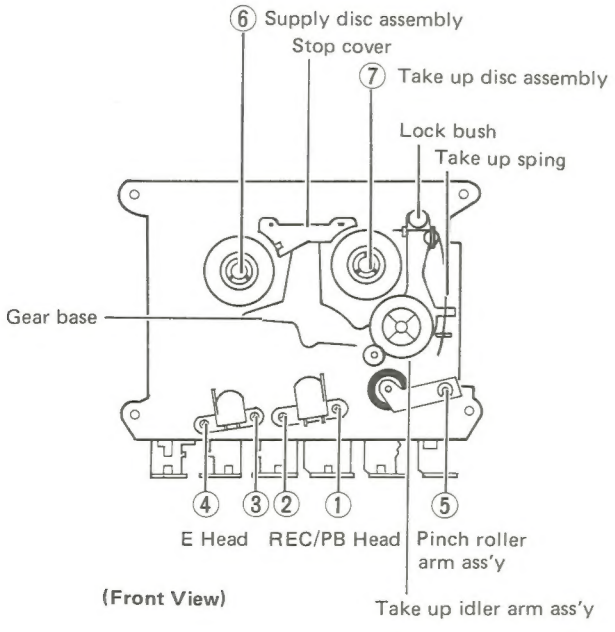


ELECTRICAL PARTS (Main amp P.W. Board ass'y)

1) Remove a nut and a washer fastening the REC LEVEL control VR shaft.
2) Remove a screw fastening the lever switch.
3) Remove 3 screws fastening the main amp P.W. Board.
4) Remove 2 plastic rivets fastening the PIN jack assembly.
5) Remove the record spring.
6) Remove 4 pawls for holding the main amp P.W. Board.



(Top View)

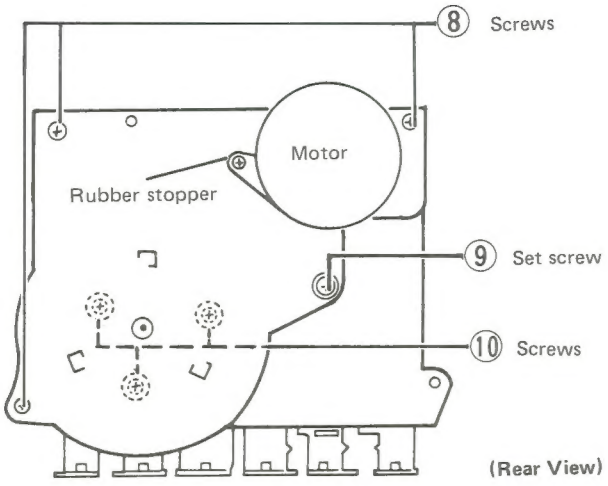


(Front View)

MECHANICAL PARTS

1. REC/PB head .....
   Remove a screw ①
   Remove a screw ② for adjustment.
2. Erase head .....
   Remove a screw ③
   Remove a screw ④ for adjustment.
3. Pinch roller arm ass'y .....
   Remove an E-ring ⑤ holding its assembly.
   Pull it off from the shaft.
4. Supply reel disc .....
   Pull out the reel disc stopper ⑥ and pull out its disc from shaft.
5. Take-up reel disc .....
   Pull out the reel disc stopper ⑦ and remove the counter belt, pull out its disc from shaft.

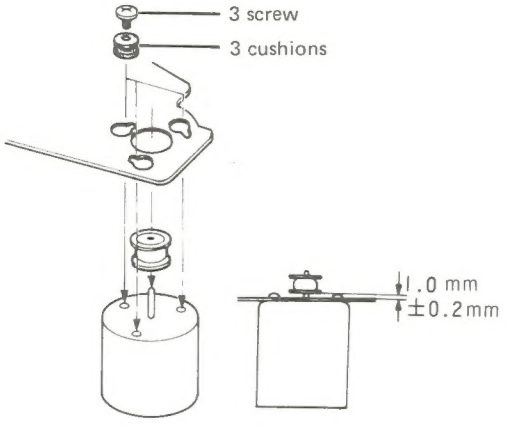
Note: (1) Remove the reel disc stoppers with a piece of sheet metal inserted between the reel disc and the stopper. (When assembling the reel disk, the stopper need a new parts. (the stopper can not use again.)
(2) Be careful not to stain the counter belt.



Flywheel assembly

1. Remove 3 screws ⑧ and a set screw ⑨ fastening the flywheel and motor bracket.
2. Remove a capstan belt.
3. Remove 3 screws fastening the capstan metal.
4. Remove the pressure lock bushing and the take up spring on front side, and then remove the take up idler arm assembly.
5. Remove the pressure position of stopper cover, and move the gear base to supply disc direction, and then remove the gear base tip from the groove of capstan metal.
6. Pull off the flywheel assembly.

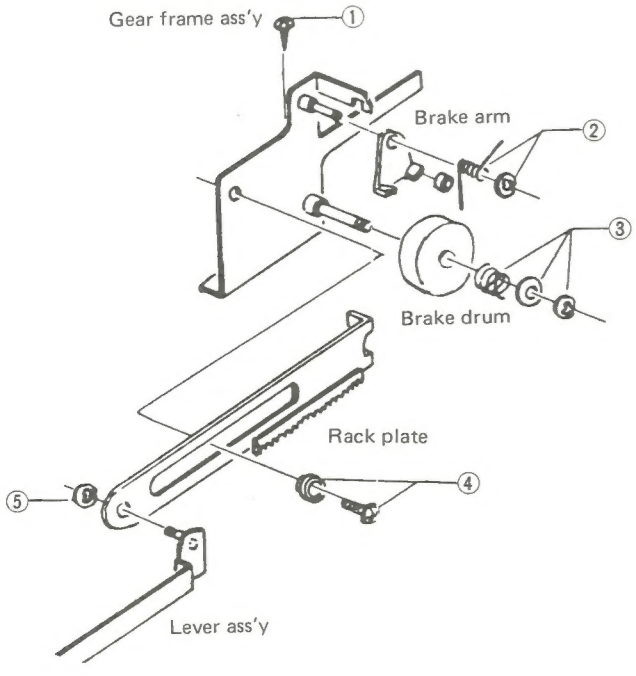
Note: When assembling the flywheel, fasten the screws after assembled the chassis to the groove of capstan metal.



Motor

1) Remove a screw fastening the rubber stopper.
2) Remove the capstan belt from the motor pulley.
3) To remove the motor, turn it in counter-clockwise direction and pull it out backward (with 3 cushions and 3 screws for fastening the motor).

Note: When replacing the motor, check the following points.
(1) Is the motor placed in correct position? (Don't make the motor's position deflective.)
(2) Does the capstan belt run in the center of the motor pulley?



DOOR BRAKE AND ITS RELATED PARTS

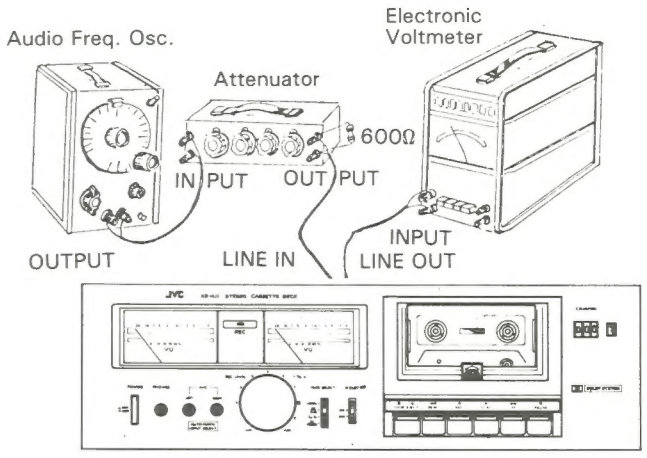
1. Gear frame ass'y ..... Remove a screw ①.
2. Brake arm and tire .....Remove the E-ring and torsion spring ②.
3. Spur gear and brake drum ..... Remove the E-ring, and spring ③.
4. Rack plate ..... Remove the screw and the collar ④.
5. Brake lever ass'y ..... Remove the E-ring ⑤.

Main Adjustments

[I] Equipment and measuring instruments used for adjustment.

1. Electrical adjustment

1) Electronic voltmeter
2) Audio frequency oscillator
   (range; 50—20 kHz and output 0 dB with impedance 600 Ω)
3) Attenuator
4) Standard tapes for REC/PB
   SONY CS-30 — FeCr tape
   BASF T308S — NORMAL tape
   BASF C401R — CrO_2 tape
   SCOTCH METAFINE — METAL tape
   } or equivalent
5) Reference tapes for playback (JVC Test Tape)
   VTT-658 (for head azimuth adj.)
   VTT-656 (for motor speed, wow flutter adj.)
   VTT-664 (for Reference level 1 kHz)
   VTT-675N (for playback frequency response)
6) Resistors
   100 Ω (for measurement of the bias current)
   600 Ω (for attenuator matching)



KD-A11

2. Mechanical adjustment

1) Gauge for checking the head position.
2) Torque gauge
3) Blank tape (C-120) for tape running checker.

[II] Adjustment and repair of the mechanism

(Adjust the mechanism or confirm that it is in normal operating condition prior to the adjustment of the electrical circuit.)

Item	Adjustment	Adjusting point	Standard value	Remarks
Adjusting record/ playback head position 	1. Connect an electronic voltmeter to the LINE OUT terminals. 2. Play back the VTT-658 test tape. 3. Adjust the head angle with the screw Ⓐ until the reading of the electronic voltmeter becomes maximum for both channels. 4. After adjusting, set the screw with screw bond.	Screw Ⓐ	Maximum	1. If the head is worn, disconnected or exceedingly magnetized so as not to provide the necessary characteristics, replace it with a new one. After replacement, the head position adjustment as well as the playback level adjustment, the bias current adjustment and the recording level adjustment are all necessary. 2. If the output difference between the left and right channels exceeds 3—4 dB, the head is defective. Replace it with a new one.
Adjusting erase head height 	Tape-to-head contact adjustment 1. Turn the adjusting screw Ⓓ for aligning the erase head until it stops. Then, turn the screw Ⓓ in the reverse direction by 180° (a ½ revolution). 2. Employ a special cassette (C-120) from which parts to the casing, where the erase head, record/play back head and capstan engage, has been cut away. Perform tape transport with the cassette tape. Adjust the screw Ⓒ until the tape runs in the center of the erase head tape guide. 3. Check it again with a BASF C401R-CrO_2 tape. Checking method: Record a 400 Hz or 1 kHz signal with 0VU+20dB. Erase the recording. Check if the erasing is satisfactorily performed. 4. After adjustment, apply screw bond on the adjusting screw to prevent its loosening.	Screw Ⓒ		Be sure to perform this adjustment after replacing the erase head.

Proper

Improper

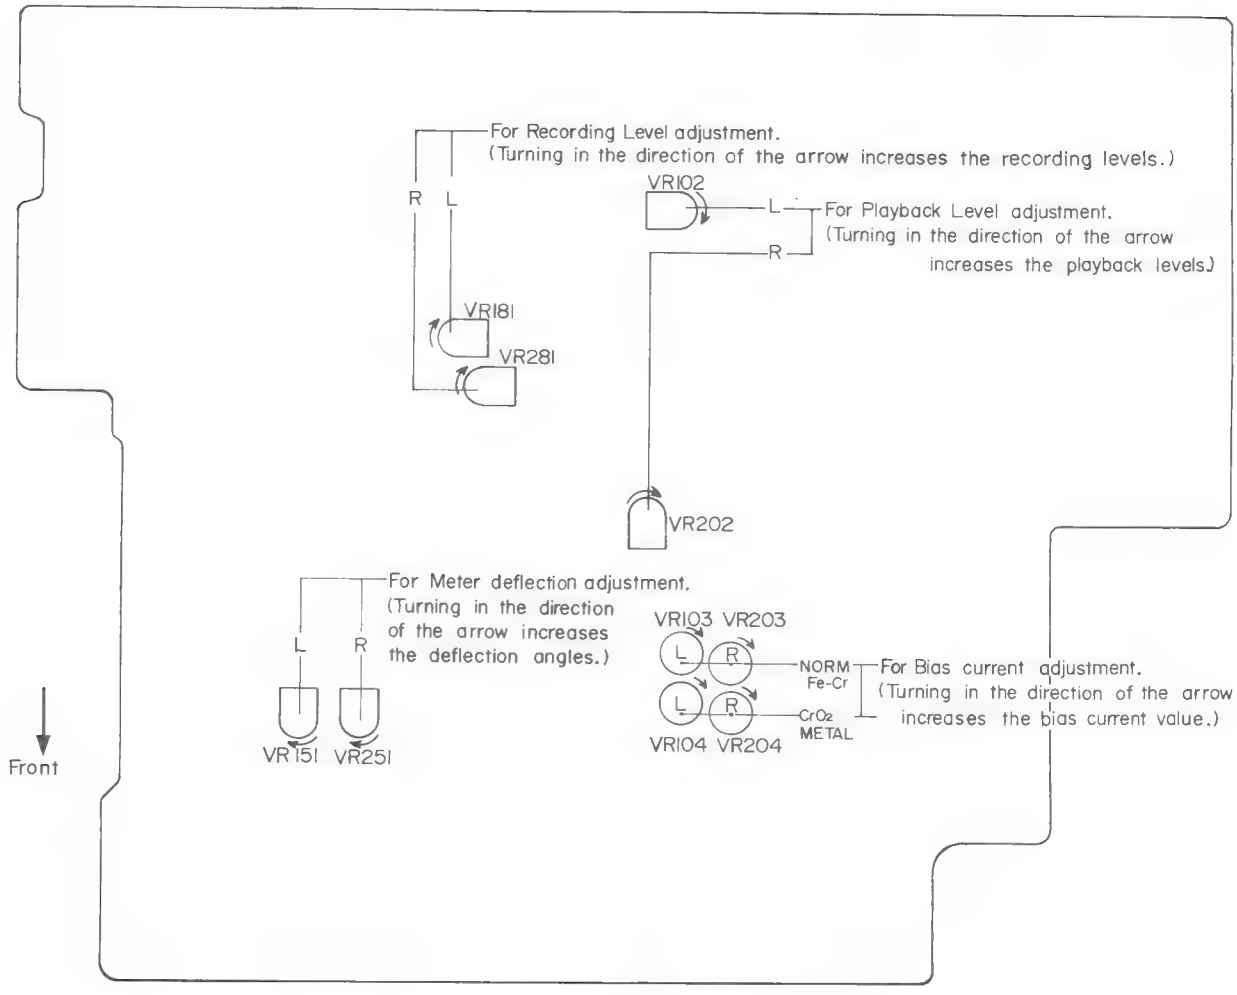
Item	Adjustment	Adjusting point	Standard value	Remarks
Adjusting motor speed	Connect a speed meter to the LINE OUT terminals. Play back the VTT-656 test tape Adjust the semi-fixed resistor in the motor until the reading of the speed meter is 3000 Hz.	Semi-fixed resistor in the motor	3000 Hz	If the speed meter functions as a wow and flutter meter, also, connect the deck to the INPUT terminals of the meter.
Checking play-back torque	Employ a torque testing cassette tape for the checking, or remove the cassette cover and use a torque gauge.		40 ~ 70 gr-cm	If the standard torque is not obtained, replace the take-up reel disc assembly.
Checking fast forward torque	Measure the torque in the fast forward mode in the same manner as in the above.		More than 80 gr-cm	If the standard torque is not obtained, perform the following. 1. Clean the capstan belt, the idler circumference, the motor pulley, the take-up reel disc circumference, the flywheel circumference, etc. 2. Replace the capstan belt or idler ass'y.
Checking rewind torque	Measure the torque in the rewind mode in the same manner as in the above.		More than 80 gr-cm	If the standard torque is not obtained, clean the capstan belt, idler, motor pulley, flywheel circumference, supply reel disc circumference, etc.

[III] Repair of wow flutter

If wow and flutter increase, check the following points. If there is defect in revolving parts, the wow and flutter generated will increase in proportion to the number of revolutions.
Play a 3000 Hz test tape, and defective part can be detected from the sound.

Section	Trouble	Repair
Capstan and flywheel	Capstan shaft has excessive run-out. Flywheel turns heavily. (shaft seisure, thrust play, etc.)	Replace flywheel. Clean the capstan shaft in the flywheel. Replace the capstan assembly.
Pinch roller	Rough rotation (Deformation scratches, or dust) The angular position of the pinch roller is not correct. The pinch roller pressure is not correct.	Replace pinch roller, or pinch roller spring. Clean the pinch roller. Adjust the pinch roller so that it is parallel with the capstan shaft.
Belt	Belt has undue run-out. Belt is dirty or slippery.	Check the belt. Replace the belt.
Back tension	Back tension is irregular, or back tension is too strong.	Replace back compression spring (under supply disc).
Motor	Motor shaft has undue run-out. Motor pulley is oily and dustry.	Replace motor. Clean motor pulley.

[IV] Electrical adjustments location



[V] Electrical circuit adjustment procedure

In all the steps (marked by an asterisk*) except the "Adjusting bias current", the adjustment is important. Be sure to perform it.

Adjustment should be performed in the sequential numerical order of the following:

Step	Item	Adjustment	Adjusting point	Standard value	Remarks
1*	Adjusting playback level	1. Playback the VTT-664 Reference tape (1 kHz) with the Tape select switch set to the NORMAL position. 2. Adjust VR 102 and VR 202 until the DIN OUT becomes 0.34V (about −7 dB).	VR102, 202	0.34 V (−7 dB)	1. This adjustment becomes necessary when a change in playback level results (for example, due to head replacement). 2. Perform this adjustment with the Dolby N.R. switch set to OFF.
2	Playback frequency response	Playback test tape VTT-675N (1 kHz, 10 kHz) for following adjustment. If the 10 kHz signal gain become nearly equal to the I kHz signal gain, cut off the wire tip 106. If the 10 kHz signal gain become low level, select 104 or 105 connector so that 10 kHz signal and 1 kHz signal gains become flat response.			

Step	Item	Adjustment	Adjusting point	Standard value	Remarks
3*	Adjusting VU meter sensitivity	1. Set the cassette deck to its recording mode. 2. Apply a 1 kHz, approx. −10 dBs signal to the DIN IN terminals. 3. Adjust the recording level controls until the signal is available at − 7 dBs at the DIN OUT terminals. 4. Adjust VR 151 and VR 251 until the VU meters deflect to 0.	VR151 251	0 VU	Perform the adjustment when the parts are replaced.
4	Checking record/ playback frequency response	Record 1 kHz, 100 Hz and 12.5 kHz signals at an input level of 0 VU to −20 dB. Play back the tape. Check to see that the 100 Hz and 12.5 kHz signal output deviations fall within the standard range, using the 1 kHz signal output as a reference. (It is basically desirable that the 1 kHz, 100 Hz and 12.5 kHz signal outputs are the same.	For normal tape: VR103, 203 For CrO_2 tape: VR104, 204	Reference frequency; 1 kHz 0±3 dB at 100 Hz 0±3 dB at 12.5 kHz	This checking should be performed for normal, chrome and metal tapes and for both right and left channels. Fe-Cr and METAL tapes use only to check.
5*	Checking recording bias current	Record 1kHz, 100Hz and 12.5kHz signals at an input level of 0VU to −20dB. Play back the tape. Adjust VR103 and VR203 (for a normal tape), VR104 and VR204 (for CrO_2 tape), until the indicated deviation of the 12.5 kHz signal output from the 1kHz signal output becomes 0.		Output deviation; 0	1. Bias current adjustment for a cassette deck should generally be performed referring to the record/ playback frequency response. This is because the frequency response of a cassette deck depends more greatly upon the bias current than does that of an open reel deck. The current measuring method described below is an alternative one. 2. If the bias current is not properly adjusted the record and playback characteristics become as shown below. 6	Adjusting recording level	1. Apply a I kHz, approx. −10 dB signal to the DIN IN terminals. Adjust the recording level controls until the signal is available at −2 dBs at the DIN OUT. 2. After checking to see if the VU meter becomes to 0, record the signal applied to both left and right channels using a normal tape. 3. Play back the recorded part. Perform the recording signal adjustment with VR181 and VR281 so that the VU meter becomes to 0.	VR142, 242	0 VU	The level difference between left and right channels for normal tape, chrome tape and metal tape should be less than 1 dB (1 VU). Perform the adjustment using a normal tape, level difference between recording and playback for CrO_2 and metal tapes should be less than 1.5 dB, and that between left and right channels should also be less than 1 dB.
7	Checking record/ playback signal distortion	1. Record a 1 kHz, 0 VU −7 dBs signal to DIN IN terminals and perform recording with the VU meter becomes 0 VU. 2. Play back the recorded part. Check the output with a distortion meter to see if the value conforms to the standard value.	Normal tape; less than 2%		Be sure to perform this adjustment following bias current and recording level adjustments.

Step	Item	Adjustment	Adjusting point	Standard value	Remarks
8	Checking signal to noise ratio recording/ playback	1. Record a 1 kHz, 0 VU signal. Stop the input by disconnecting from the terminal to perform non-signal recording. 2. Playback the recorded part. Measure the 0 VU recording output and the non-signal recording output for comparison using an electronic voltmeter. Check to see if the value conforms to the standard value.	Normal tape; More than 42 dB Chrome tape; More than 42 dB Metal tape; More than 42 dB		Apply an output (−20.5 dBs) to the DIN IN terminals with the recording level controls set to maximum so that the VU meter becomes to 0.
9	Checking erasing co-efficient	1. Apply a l kHz signal to the DIN IN terminals. Adjust the recording level controls until the VU meter becomes to 0. 2. Erase a part of the recording. 3. Measure the output difference between the erased part and non-erased part to compare with an electronic voltmeter.		More than 65 dB	For the measuring, connect a band pass filter between the deck and the electronic voltmeter.

NOTES:

1. Unless otherwise specified, all resistors are 1/4W, ±5% carbon resistors.
   And all capacitors are 50V fixed ceramic capacitors or 50V Mylar capacitors.
2. UF — Unflammable carbon resistor
   MF — Metal film resistor
   OMF — Oxided metal film resistor
   Ta — Tantalum solid electrolytic capacitor
   LL — +20% low leak current electrolytic capacitor
   PP — Polypropylene capacitor
   PS — Polystyrene capacitor
   MM — Metallized mylar capacitor
   NP — Non-polarized electrolytic capacitor
3. Blue line shows the signal at playback.
   Red line shows the signal at recording and +B circuits.
4. [redacted] parts are safety assurance parts. When replacing those parts, make sure to use the specified one.

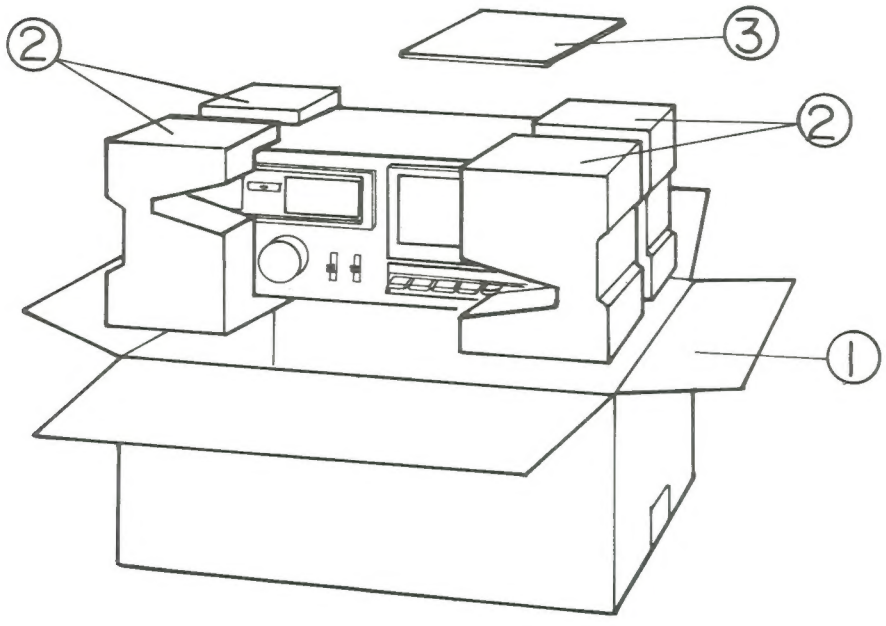
Packing



Position of control and switch knobs at renew packing.

Power switch	; OFF
Rec level control	; MIN
Tape select	; SA/CrO2
DOLBY NR	; ON
Mecha operation buttons	; OFF
Counter	; 000.
